In computing the said period of three clear days, Sundays and Customs holidays shall not be taken into account, but in ascertaining the period for which any goods are liable to double rent, account shall be taken of Sundays and Customs holidays and a fractional part of a period of twenty-four hours shall count as a full period of twenty-four hours.

(ii.) All goods which are within five days from the date of landing (of which days the day of landing and the day of re-shipment shall each count as one) either (a) lodged within the re-shipment warehouse provided by the Government or (b) re-shipped shall be free of warehouse rent. Provided that all goods lodged in the re-shipment warehouse shall be liable to a single rate for every period of five days or portion of five days from the date of landing (including day of removal, Sundays, and Customs holidays). Provided, further, that if such goods be not re-shipped within a period of six weeks from the date of landing rent will be charged as on import cargo from the expiration of six weeks from the date of landing until the date of re-shipment.

* Weighing not more than 400 lb. ; if over that weight to pay as hogsheads.

† Casks under 70 gallons pay as half-pipes or hogsheads.

(iii.) The liability to single and double warehouse rent extends to all coastwise goods, whether of foreign origin or of local production and manufacture. Provided that rent shall not be recovered for goods carried only on a coastwise permit between out-bays at which no Customs-house is stationed and the ports to which the out-bays belong, nor for duty-paid goods shipped on boat notes from Kayts to Jaffna. The Islands adjoining and forming part of the Northern Province are for this purpose out-bays of the ports of Jaffna and Kayts.

(iv.) Chunks are exempted from warehouse rent. Cargoes of coral stones are exempted from double rent.

(v.) His Excellency the Governor may by special order in each case remit any portion of the above rent, under circumstances of an exceptional nature to be stated in such order, for any goods on which such rent is leviable or has been paid; provided, that no application for such remission shall be entertained unless it shall have been received within six months from the date on which such rent became payable.

METEOROLOGY.

General Remarks.—There is a marked variation in climate between the different parts of Ceylon. In the low-country, with a mean temperature of the order of 80° F., a noticeable feature is the small range of both temperature and pressure. There is, however, wide divergence between the moist conditions in the south-west of the Island, where the average annual rainfall varies from 100 to 200 inches, and the dry zone areas of the north, north-west, and south-east.

2. Inland, with altitudes reaching 8,000 feet, the temperature is cooler, and shows a bigger range. There is a corresponding change in vegetation, and the conditions are altogether more akin to those in the temperate zone.

3. *Rainfall.*—The highest annual rainfall registered in 1920 was at Watawala Railway Station, which had a total of 257·98 inches, and 203 days on which rain fell. The lowest annual rainfall was at Hambantota, which had a total of 31·40 in. in 121 days. The stations with highest and lowest average annual rainfall are, respectively, Carney estate, with 213·80 inches in 224 days, and Marichchuk-kaddi, with 33·22 inches in 57 days. The longest drought occurred at Puvarasankulam, lasting for 157 days, May 4 to October 7. The longest wet period occurred at Holmwood estate, lasting for 53 days, June 10 to August 1. The annual rainfall at Colombo (Cinnamon Gardens) was 90·73 inches in 189 days. At Kandy 94·29 inches were registered in 205 days, while the annual rainfall at Nuwara Eliya was 89·47 inches in 229 days.

June and November were the two months in which the rainfall was most noticeably above average, but examination of the annual totals shows that this year there is no one phrase that summarizes them all. The areas with more than their average rainfall include roughly the Northern Province, most of the North-Western Province, the western face of the hill country, and the low-country west of it (i.e., parts but not the whole of Western Province, Central Province, and Province of Sabaragamuwa).

Galle and Batticaloa were both above their average, but the greater number of stations in the Southern and Eastern Provinces were not, and both Uva and the North-Central Province can show offsets in both directions.

4. *Temperature.*—The station showing the highest mean shade temperature for the year was Trincomalee, with 83·7° F., and the lowest Nuwara Eliya, with 59·3° F. The figures for Colombo and Kandy were 80·5° F. and 76·2° F., respectively.

The highest shade temperature recorded during the year was 98·5° F. at Trincomalee on June 23. The highest on record is 103·7° F. at Trincomalee on May 12, 1890. The lowest this year was 27·3° F. at Nuwara Eliya (6,000 feet above sea level) on February 23, which is the lowest since 27·1 in 1914 at the same station.

The highest shade temperature at Colombo in 1920 was 93·0° F. on March 26.

The mean daily range, i.e., the difference between the mean of the maximum and the mean of the minimum, was highest at Nuwara Eliya (18·2° F.), and lowest at Galle 8·2° F. At Colombo and Kandy it was 11·4° F. and 15·1° F., respectively. The absolute range for the year, i.e., the difference between the highest and the lowest readings actually recorded at any one station, was greatest at Nuwara Eliya (50·2° F.), and lowest at Galle (20·7° F.).

5. In no case did a station's mean temperature for 1920 differ by more than half a degree from its average derived from previous years. April was the month with the biggest deficit below average, and January and February were the two months in which temperature offsets were, on the whole, most uniformly above normal, though the biggest individual deficit also occurred in the latter, viz., Nuwara Eliya 55·4, or 2·2 below its average of 57·6 for that month, a result for which a number of distinctly cold night temperatures were responsible.

6. The arrangement of the tables differs somewhat from last year as the result of an attempt to condense more information into the same space. Averages up to date of temperature and pressure are included this year, and Table VIII. of last year (the climatic summary) has been omitted, though most of the matter of it has been included elsewhere. This year's temperatures are readily obtainable from Tables II. and III. by combining the offsets from average with those averages.

7. Similarly, maximum and minimum temperatures can be obtained from the mean values (Table II. and V.) and the daily ranges (Tables III. and VI.).

8. The duration of bright sunshine (an important item here) disappears from the Tables, but reappears in Diagram VII., and maps are given for average rainfall as well as for 1920. The composite rainfall map for the months—January–March and October–December—has been omitted, but this enables Diagram No. 1 to be included, the left half of which is of a type that was only discontinued during the war, while the right hand half of it (periods of drought and wet) is a new item.

TABLE VIII.—Average Monthly Mean Pressure of Stations in Ceylon up to 1920, inclusive, in inches of mercury corrected to 32° F. sea level and 45° latitude, together with the offsets of the corresponding values recorded in 1920 from these averages. The whole number is 29 inches throughout, except in the case of Nuwara Eliya. For this station (altitude 6,200 feet) the readings are not reduced to sea level, and the figures given are corrected to 32° F. only.

TABLE X.—High Velocities of Wind at Colombo (Fort) during 1920.

This Table gives the times at which the highest velocities were recorded at Colombo (Fort). In the absence of recent Kew certificates for the instruments concerned, the numerical values below must only be accepted as approximations roughly comparable among themselves, but not precise. In cases where no velocity is given, it is estimated that at least 25 miles per hour was reached.*

RETURN OF PRISONS AND PRISONERS.

Replies to the Questions, compiled from the Returns of the respective Superintendents.

QUESTION I.

If the prison is on the separate system, is the separation complete? And if not, what is the separation enforced by day and night, respectively?

All the penal stage prisoners of the Island, if sentenced to over a month, are passed through one of the following jails:—Welikada, Kandy, Jaffna, Anuradhapura, Galle, and Batticaloa.

In these jails the penal stage prisoners are worked on the separate system. They are confined in separate cells, and are worked in stalls. They are marched from their cells to the stalls in single file three paces apart, and are not allowed to speak or communicate with each other at all. Prisoners not in penal stage are not worked on the separate system.

QUESTION II.

If not on the separate system, what provision is there for the supervision of the prisoners while in association ?
The males are supervised by male officers of various grades, and the females by matrons, in all jails.

QUESTIONS III. AND IV.

How many cells are there ; and how many associated wards ? Taking the *average* number of prisoners in jail, how many cubic feet of space are there for each prisoner during the hours of sleep ?

QUESTION VI.

Is penal labour—that is, labour by treadmill, crank, or shot-drill—in force ?

The penal labour consists of beating coir husk, metal-breaking, and coir yarn twisting. Treadmill work is not in force now.

Buckets are removed twice daily, in the morning and evening, and their contents buried far away from the hospital. Rain water carried away in open cement concrete drains placed around the hospital into the river.

Karawanella.—An unlimited quantity. Two wells in the hospital premises and the Kelani river in the vicinity of the hospital. Pure well water alone is filtered for drinking purposes. There are separate bathrooms for males and females, with tubs. The Kelani river, in the vicinity of the hospital, also affords convalescent patients a resort for bathing. Dry-earth system. The excreta are removed and buried twice a day at some distance from the hospital.

Kegalla.—Sufficient quantity. Well water. Pure. Water is pumped from the well to a tank erected at a higher level, and from it pipes lead to bathrooms, latrines, and quarters. Dry-earth. The excreta are buried at a distance from the hospital.

Kitulgala.—Unlimited quantity. Water is conveyed to a reservoir in hospital by pipes from a spring half a mile away. Good. Eight bathrooms with water service. Dry-earth system. Clean. Nil.

Kolonna.—Water for cooking, washing, and other purposes *ad libitum*. Well water, which is used for drinking, is insufficient, as the well runs dry during the hot season. A well in the hospital premises and a stream running behind the hospital. Hard. Boiled and filtered before use for drinking purposes. Water carried in buckets to the lavatories. Convalescent patients bathe in the river. Dry-earth system. Privies kept clean. Excreta removed and buried twice a day at a distance from the hospital.

Rakwana.—Unlimited. Drinking water is obtained from a well, and the water is boiled and filtered before use. Good. Each ward has its own bathroom, containing a zinc bath, which is filled every morning with water. Dry-earth system of latrines. Buckets are emptied twice daily, and the excreta are buried at a distance from the hospital.

Ratnapura.—Unlimited. Water is laid on in the premises by means of pipes from about half a mile away in the hills. Excellent. There are bathrooms for male and female patients, most of whom prefer bathing in the river which runs by the hospital. No sewers. The latrines for male and female patients are conducted on the dry-earth system. The excreta are removed daily and buried in the jungle.

Undugoda.—A sufficient quantity. Natural spring. Pure. Water service is provided to the bathrooms by means of a system of pipes. Dry-earth. The excreta are buried at a distance from the hospital. Low Doulton's plates fixed at floor level.

- (1) The minimum width ?
- (2) The minimum navigable depth, low water ordinary spring tide ?

(Note.—If between the entrance and the deep sea there are bars or shoals where a lesser depth occurs than the minimum indicated above, a list of such obstructions and of the depths over them (low water ordinary spring tide) should be given.)

2. In the approach channel from bar or entrance to berthing accommodation, what is—

- (1) The minimum and maximum width ?
- (2) The minimum and maximum depth, low water ordinary spring tide ?

3. What is—

- (1) The rise and fall of tides—
 - (a) Ordinary springs ?
 - (b) Ordinary neaps ?
- (2) The rise of ordinary neaps above low water ordinary spring tide ?

4. What is the maximum available depth of water—

- (a) At piers or wharves low water ordinary spring tide ?
- (b) In the case of enclosed docks in the entrance locks, if any, and at dock quays, high water ordinary neap tide ?

5. What are the respective lengths of piers, wharves, or (in the case of enclosed docks) dock quays, where the maximum depth of water, referred to in Question 4, exists ?

What percentage does the total of these lengths bear to the total accommodation at the port ?

6. What are the dimensions (length, loaded draught, and beam at that draught) of the largest vessels which, under existing circumstances, can be—

- (a) Berthed alongside any pier or wharf (low water ordinary spring tide) ?
- (b) In the case of enclosed docks—
 - (1) Admitted direct to ? ; or
 - (2) Admitted through the entrance lock of any important dock or docks, high water ordinary neap tide ?

7. What are the dimensions (length, breadth, and depth over sill high water ordinary neap tide) of the largest dry dock or floating dock in the port ?

8. Are operations in progress to increase the depth of water—

- (a) At the entrance and in the approach channel ?
- (b) In the case of enclosed docks at the entrance lock, if any, of any important dock or docks ?
- (c) At the principal berths to 40 feet at low water ordinary spring tide (in the case of the berths at enclosed docks, high water ordinary neap tide), and is accommodation being provided for vessels 1,000 feet in length and of 100 feet beam ?

If not, to what extent is deepening being effected, and for vessels of what dimensions (length, draught, and beam at that draught) is accommodation being provided or in contemplation ?

4. No enclosed docks. All vessels lie out under the shelter of the breakwaters, and are loaded or discharged from lighters. Practically all of the western half of the harbour within the limits of dredging has a minimum depth of 31 feet below low water ordinary spring tide, but the greater portion of this is 33 feet deep. The eastern half has a minimum depth of 27 feet, but a considerable portion is 30 feet in depth or more. The deepening of the harbour to 33 feet below low water ordinary spring tide over certain areas which are at present above that level is now in progress.

The proposal to dredge 250 acres of the north-western portion of the harbour to 36 feet, at a cost of £190,000, has been sanctioned, and a commencement will be made with this work when the dredger, which is now on order, is received.

5. See answer to Question 4.

6. The largest vessel berthed in Colombo Harbour is the Cunard Steamship Company ss. "Caronia"; length 650 feet, breadth 72 feet 2 inches, and draught 30 feet. With the existing arrangement, three vessels of 650 feet length and beam in proportion and 30 feet loaded draught can be berthed. With slight alterations longer ships could be berthed.
